QUALITY • STRENGTH • INTEGRITY

WE STAND BEHIND OUR PRODUCTS

EFFLORESCENCE

— A NORMAL OCCURRENCE —

Efflorescence is the powdery white, chalky residue caused by water rising through the concrete, evaporating and leaving dissolved minerals on the surface.

NORMAL

Common with any concrete mix using Portland cement and does not indicate any structural or manufacturing defects.

CLEANS EASILY

Wears off with curing or can be washed off from unsealed surfaces with soap and water or a commercial efflorescence remover.

PROTECT & RESTORE

Use commercial concrete sealers to help restore and protect pieces. Sealers can be sprayed or painted onto dry, clean concrete.
