DIAMOND
DESIGN PRECAST, Inc.

QUALITY • STRENGTH • INTEGRITY

WE STAND BEHIND OUR PRODUCTS

THE BENEFITS OF USING SPRAY LOCK®

— PROTECT TODAY. PERFORM FOREVER. —

SPRAY LOCK® is a penetrating sealer that reacts chemically with the concrete to form an integral, insoluble barrier within the pores and capillaries. This helps protect concrete from water penetration, moisture damage, and the elements—for the life of the structure.

PREVENTS WATER PENETRATION

Forms an integral barrier within the concrete to block water from entering the pore structure.

INCREASES DURABILITY

Helps protect against freeze–thaw damage, deicing salts, corrosion and sulfate attack.

ENHANCES STRENGTH

Improves concrete density and reduces permeability, helping maintain structural integrity.

REDUCES MAINTENANCE

Minimizes water absorption, efflorescence, mold, and staining—saving time and money over the life of the structure.

UV & WEATHER RESISTANT

Provides long-lasting protection from harsh weather conditions and UV exposure without yellowing or peeling.

IDEAL FOR PRECAST APPLICATIONS

Perfect for walls, columns, slabs, architectural precast, and other exposed concrete elements.

HOW SPRAY LOCK® WORKS

SPRAY LOCK® penetrates deep into the concrete and reacts with free lime to form insoluble crystals. These crystals fill pores and capillaries, creating a permanent barrier that prevents water and harmful chlorides from entering, while still allowing the concrete to breathe.

EASY TO USE

- Added to our concrete mix for built-in, long-lasting protection.
- Single application for long-lasting protection.
- No change to appearance, slip resistance, or vapor permeability.

WE STAND BEHIND OUR PRODUCTS

At Diamond Design Precast, we use SPRAY LOCK® because we believe in building precast concrete that performs—today, tomorrow and for years to come.

SPRAY LOCK®
BUILT TO PROTECT.
